

PROGEO

PIEMONTE

app

Free mobile application for enhancing and promoting geological heritage in the Piemonte Region (NW – Italy). It is a project developed by the Earth Sciences Department of Torino University within the PROGEO-Piemonte project (progeopiemonte.it).

PROGEO-Piemonte app includes nine different **geological tours** located within the geothematic areas defined during the project: a tours network allowing people to begin their journey through the **geoheritage** of the Piemonte Region. The itineraries connect geosites and facilities providing descriptions of the natural and cultural landscape and interpretations of the related geological and geomorphological processes. All the map tiles are integrated into the application, in order to avoid the need of downloading the map on the go, which in some cases might result in expensive roaming costs.
